

Essential to Great Quality Healthcare

Hospitals | Medical Centers | Rehabilitation Centers | Assisted Living

Broad Selection for the Unique Needs of Healthcare

A reliable supply of filtered water, sterile water, and chewable ice is critical for fulfilling the needs of patients and staff at hospitals, dental or medical offices, surgical centers, and senior living facilities.

- Touchless filtered water coolers for waiting areas and medical offices
- High-capacity water and ice dispensers for clinical settings
- Filtered chewable ice and water dispensers for delivery and post-op recovery areas
- Sparkling and flavored filtered water systems for staff break rooms and cafeterias
- Deionization systems for sterile water needs
- Emergency water storage to ensure constant clean water supply

Clean Water is Critical

Quench's state-of-the-art filtration technologies remove sediment, reduce chemical contaminants, including 99% of lead, and get rid of off-tastes and odors.

Quench's filters are NSF/ANSI 42 or NSF/ANSI 58 certified by independent authorized 3rd party laboratories to guarantee crisp and clean drinking water. Quench water and ice systems feature UV-C sanitization, antimicrobial surface protection, recessed spigots, food-grade tubing, and stainless steel tanks to maintain water cleanliness through dispensing.

Also only Quench offers mineral-infused and electrolyte enhanced filtered drinking water on-demand with quenchWATER+, which some studies indicate may allow the body to absorb water more readily.*

Cost Effective, Green Solutions

How many sustainability initiatives actually save money? Switching to a bottleless filtered water system gives your healthcare facility a quick sustainability "win" while cutting drinking water costs by as much as 80% versus traditional water delivery.

One Quench filtered water system prevents over 7,000 single-serve plastic water bottles from entering the waste stream!
