

# A Sustainable Way to Cut Spending

Public Spaces | Municipal Offices | State Houses | Federal Buildings

## A Green Solution That Lets Taxpayers Keep More Green

Government agencies must keep tight budgets while meeting sustainability goals. By switching to a bottleless filtered water system, government workplaces can eliminate costly and wasteful plastic jugs and significantly lower its carbon footprint. Many Quench customers save up to 80% by switching from bottled water delivery to one Quench bottleless water cooler and one Quench water cooler can keep 7,000 plastic bottles or 150 5-gallon water jugs out of the waste stream every year!

## A System for Every Space

Government buildings are complicated places, with vast public spaces, private office areas, and lots of thirsty staff and visitors. Government agencies, including post offices, regional railways, courthouses, police and fire stations, and federal agency buildings, rely on Quench for:

- Commercial-capacity, touchless filtered water coolers for public spaces
- High-capacity water and ice dispensers for office spaces and waiting rooms
- Sparkling and flavored water systems for staff break rooms and cafeterias
- Emergency water storage systems to ensure constant clean water supply

## Clean, Fresh, Healthy Water On-Demand

All Quench machines use point-of-use filtration and purification technology, including reverse osmosis and carbon filtration, to take government spaces' hydration to the next level. Our filters are NSF/ANSI 42, 53, 58 certified by an independent authorized 3<sup>rd</sup> party laboratory to guarantee crisp and clean drinking water.

Only Quench offers mineral-infused, and electrolyte enhanced filtered drinking water on-demand with quenchWATER+. Studies have indicated that mineral-infused drinking water may allow the body to absorb water more readily.\*
